Lifting capacities at zero degree boom angle on rubber - 360°			
Boom angle	Main boom length in feet		
	33	40	50
0°	7580 (28.2)	4850 (35)	2410 (45)

NOTE: () Reference radii in feet. A6-829-100836B

NOTES:

- All capacities above the bold line are based on structural strength of boom extension.
 - 29 ft and 51 ft boom extension lengths may be used for single line lifting service.
 - Radii listed are for a fully extended boom with the boom extension erected. For main boom lengths less than fully extended, the rated loads are determined by boom angle. Use only the column which corresponds to the boom extension length and offset for which the machine is configured. For boom angles not shown, use the rating of the next lower boom angle.
- WARNING:** Operation of this machine with heavier loads than the capacities listed is strictly prohibited. Machine tipping with boom extension occurs rapidly and without advance warning.
- Boom angle is the angle above or below horizontal of the longitudinal axis of the boom base section after lifting rated load.
 - Capacities listed are with outriggers fully extended and vertical jacks set.
